### 1. Pull an Image from docker hub and run it in docker playground.

The screenshot shows the Docker Playground interface. On the left, there's a sidebar with a clock showing 03:52:39, a 'CLOSE SESSION' button, and a list of instances. The main area displays a terminal window for a container named 'cdls18n9\_cdls36u0qau000cghio0'. The terminal shows the following commands and output:

```
$ docker run -it hello-world
Hello from Docker!
(manager1) (local) root@192.168.0.7 ~
$ docker pull hello-world
Using default tag: latest
latest: Pulling from library/hello-world

$ docker run -it hello-world
Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
   (amd64)
3. The Docker daemon created a new container from that image which runs the
   executable that produces the output you are currently reading.
4. The Docker daemon streamed that output to the Docker client, which sent it
   to your terminal.
```

### 2. Create a docker file for the jobportal application and deploy it in Docker desktop application.

FROM ubuntu

RUN apt-get update

```
RUN apt-get install apache2 -y

### 3. Create a IBM container registry and deploy hello world app or job portal app

```
(siva@kali)-[~]
$ docker tag hello-world icr.io/ibm-cloud-project/helo-wrld:v1

(siva@kali)-[~]
$ docker images
REPOSITORY                                TAG          IMAGE ID          CREATED           SIZE
